- Aurkezpen bat prestatu ondorengoak eginez (**binaka**)
  - Debian 13 makina birtualean
    - OpenTofu
      - Instalatu
      - Proxmox kudeatu dezan konfiguratu (Telmate-ren *provider*-a erabili)
        - Proxmox makina birtualean LXC (Linux Container) bat sortu
      - Google Cloud Platform kudeatu dezan konfiguratu
        - GCP-en makina birtual bat sortu
    - Ansible
      - Instalatu
      - Proxmox eta GCP-eko makinak eguneratzeko (apt update & apt upgrade) *playbook* bana sortu
    - OpenTofu
      - Proxmox eta GCP-eko makinak sortu ondoren Ansibleko makinak eguneratzeko *playbook*-ei deitzeko main.tf fitxategiak moldatu
        - Horrela makinak sortzeaz bat eguneratuko dira
